

# OUR CITY FOREST

---

Our City Forest aims to incorporate tree diversity in all projects. Projects will always strive to install the largest tree species for the given location to maximize benefits. All tree sizes are referenced from maximum height at maturity from the CalPoly SelecTree tool. All tree species are selected referencing the water use rating of Very Low, Low, or Moderate for the North-Central Coastal Region of the Water Use Classification of Landscape Species (WUCOLS) from University of California Davis. Please see below for an updated list of species listed by size.
